Art Unit: 2881

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain <u>a</u> patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1-8 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 26-31 of prior U.S. Patent No. 5,786,598. This is a double patenting rejection.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 8-37 are rejected under the judicially created doctrine of obviousnesstype double patenting as being unpatentable over claims 26-31 of U.S. Patent No. Application/Control Number: 10/039,311

Art Unit: 2881

5,786,598. Although the conflicting claims are not identical, they are not patentably distinct from each other because of the following reasons:

Regarding claim 8, patented claim 26 recites all claimed limitation of claim 8 where the sealed contact lens container corresponds to the blister of claim 26.

Regarding claim 9, patented claim 26 recites the limitation of claim 9.

Regarding claim 10, patented claim 29 recites the limitations of claim 10.

Regarding claims 11-15, 21-22, patented claims 26-30 recite all the material limitations of the claims but fail to recite the intensity or energy density of the light pulses utilized in U.S. Patent 5,786,598. However, the practice of the invention requires that the light have an energy density of at least 2.5 mJ/cm² (Note Col. 9-10 of Patent 5,786,598) and that light having a wavelength component at about 260 nm (Col. 10) in the ultraviolet range is necessary to rapidly kill microorganisms. Therefore, it is apparent that the practice of the 5,786,598 patent cannot be accomplished without at least one percent of the pulses having a wavelength at about 260 nm, which is in the ultraviolet range, and where the energy density of each pulse is at least 2.5 mJ/cm².

Regarding claim 16, patented claim 26 recites all limitations of claim 16.

Regarding claim 17, patented claim 26 recites the limitations of claim 17.

Regarding claims 18-19, patented claim 26 recites the limitations of claims 18-19.

Regarding claim 20, patented claim 29 recites the limitations of claim 20.

Regarding claims 23-28 and 30-37, patented claims 26-31 recite the limitations of claims 23-28 and 30-37 where the claims recite a method. The method steps are not

Art Unit: 2881

distinct from the use of the material elements recited in the patented apparatus claims 26-31.

Page 4

Regarding claim 29, which recites the use of far UV light, far UV light has a wavelength between about 200 nm and 300 nm. Since patented claim 29 recites the use of light between 180 nm and 300 nm, the far UV range is encompassed, along with all other limitations of claim 29.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David A Vanore whose telephone number is (571) 272-2483. The examiner can normally be reached on M-F 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John R. Lee can be reached on (571) 272-2477. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
